

# Brompton – nano

*– the electric bike kit for the Brompton!*

*Convert the  
world's best  
folding bike  
...*

*... to the  
world's best  
folding  
electric bike!*

The Brompton–nano<sup>®</sup> is an electric bike kit specially designed for the Brompton folding bicycle. Using our small powerful nano<sup>®</sup> hub motor the Brompton–nano<sup>®</sup> gives the rider the extra assistance that takes out the effect of hills and headwinds, enabling you to arrive at your destination without the sweat!

- The Brompton – nano<sup>®</sup> can effortlessly propel the rider to around 12mph, with or without the rider undertaking any additional peddling.
- nano<sup>®</sup> motor's free-wheeling capability and relative lightweight make it easy to pedal without electric power.
- A range of different battery options giving a range, depending upon terrain and the amount of peddling, of between 5 and 40+ miles.
- Controller supports all battery types and capacities enabling complete freedom of battery choice.
- The nano–motor<sup>®</sup> adds an additional 2.2Kg to the bike while the battery will typically add 2.7Kg in our recommended configuration.
- Unobtrusive, near silent operation.
- The preferred location for the battery is in the front luggage bag this can be dropped on a specially converted luggage block to make the electrical connection without the need to connect wires.

Twist grip throttle –  
simply twist and go!

Specially adapted  
luggage connects  
power to the motor  
when bag dropped  
in position.

Battery sits  
in bottom of front  
luggage bag

nano motor built  
into new wheel

- The folding capability of the Brompton remains unchanged without any additional steps or time required. By splitting the extra weight between bike and luggage bag the portability of the Brompton is maintained.

## Fitting

Fitting can be undertaken by anyone competent at DIY with some familiarity with bike maintenance in approximately 2-3 hours by following the supplied instructions. We recommend you get the bike checked by your local bike shop once you have installed the nano motor. Alternatively fitting can be undertaken by us at our workshop in Marlborough, Wiltshire.

## What is included?

The standard Brompton – nano® kit costs £340, including VAT and UK mainland delivery and comprises:

- nano-motor® fitted in new wheel.
- Specially widened front forks (The existing forks are not wide enough to accommodate the nano-motor®)
- Controller, used to feed the required amount of power, as determined by the setting of the twist grip, from the battery to the motor.
- All necessary additional wiring.
- Twist grip throttle (and matching handlebar grip for other side).
- Luggage block, converted to take electrical contacts.
- Fitting instructions.

## What is not included?

- The Brompton bike.
- Tyre and inner tube.
- Front luggage bag
- Tools for fitting.
- Battery

## Battery options
